

RF Attenuator Kit

Product Overview

The coaxial fixed attenuator is applicable to the situations that require power level reduction and circuit matching. It can absorb the energy of the transmission wires quantitatively, extend the power range, control the power level and make precise measurements of the power and frequency spectrum of various RF microwave transmitters by working with small power meter, integral test instrument or spectrum analyzer.

The average power of this series coaxial fixed attenuator is 2 W. This product features wide working frequency, low standing wave coefficient, high attenuation precision as well as strong anti-pulse and anti-burnout abilities.

Specifications

Model	Qty.	Frequency Range	Attenuation Value	Insertion Loss	VSWR
ATT12061L	1	DC to 12.4 GHz	6 dB	±0.7 dB	1.35
ATT12101L	2	DC to 12.4 GHz	10 dB	±0.7 dB	1.35

Mechanical Specifications

Dimensions	20mm × 77mm
Temperature Range	-55°C to +125°C
Weight	80g
