

BCI-P1

Bulk Current Injection Probe 1 MHz – 400 MHz

- Meets specifications of ISO 11452-4:2005 and IEC 61000-4-6
- Frequency range from 1 MHz up to 400 MHz
- Designed for automotive BCI testing
- Low insertion loss

The Bulk Current Injection Probe is used to inject RF-current into cables of electrical equipment to test the susceptibility against radiated electromagnetic energy.

It was designed to meet the specifications of ISO 11452-5:2005 and IEC 61000-4-6 standards for automotive BCI testing with secondary currents of 300 mA and more.

The probe can be easily clamped around test conductors and supports cable harness diameters up to 40 mm diameter.
