## CDN EMCL-35

## EM-Coupling clamp

IEC / EN 61000-4-6

- For the coupling during immunity tests according to IEC/EN 61000-4-6
- Frequency range $10 \mathrm{kHz}-1 \mathrm{GHz}$
- Suitable for cables up to 35 mm , for thinner cables up to 20 mm : use CDN EMCL-20

## For cable diameter up to 35 mm , calibration unit and calibration data are supplied with each unit!

## Overview

EM coupling clamps are always used when the use of coupling / decoupling networks (CDN) does not seem suitable or appropriate. This applies, for example, to unshielded cables consisting of a large number of individual conductors.

With the electromagnetic coupling path, both capacitive and inductive coupling into the cable connected to the test object is achieved.

The EM coupling clamp has a directivity of $\geq 10 \mathrm{~dB}$ above 10 MHz , so that a defined impedance between the asymmetrical connection point of the auxiliary / additional equipment and the reference ground plane is no longer required. Above 10 MHz , the behavior of the EM coupling link is therefore similar to that of coupling/ decoupling networks.

## Key facts

- EM-coupling clamps for immunity tests on cables up to 35 mm diameter
- Low insertion loss: less than 15 W amplifier power is required to achieve the highest test level of 10 V
- Supplied as standard with calibration set and individual calibration data

## Technical data I

| CDN EMCL-35 |  |
| :--- | :--- |
| Frequency range | $10 \mathrm{kHz}-1 \mathrm{GHz}$ |
| Nominal impedance | 50 Ohm |
| Max. input level |  |
| $0,15-100 \mathrm{MHz}$ | $100 \mathrm{~W}, 15 \mathrm{~min}$ |
| $100-230 \mathrm{MHz}$ | $100 \mathrm{~W}, 5 \mathrm{~min}$ |
| $230-1000 \mathrm{MHz}$ | $50 \mathrm{~W}, 3 \mathrm{~min}$ |

| Connector | N-type female |
| :--- | :--- |
| Cable diameter max. | $<35 \mathrm{~mm}$ |
| Dimensions (L×W $\times \mathrm{H})$ | $666 \times 135 \times 120 \mathrm{~mm}$ |
| Weight | approx. 14 kg |

Technical data II

## Typical coupling factor

$$
\text { Network Analyser HP8751A (S.-No.: } 33151501756 \text { ), Test Set } 87512 \mathrm{~A} \text { (S.-No. MY43 } 100614 \text { ) }
$$

Insertion loss ( $2 \times 150 / 50$ Ohm adapter in series), Measurement uncertainty: $\pm 0,2 \mathrm{~dB}$
EMCL-35, Serial no:: 19102215-0104

Typical decoupling factor (transformed)

## CDN EMCL-35

## EM-Coupling clamp

Measured amplifier power

Measured amplifier power to achieve the highest level required in EN 61000-4-6 of 10 V .
Measurement was carried out with 6 dB attenuator and $80 \%$ amplitude modulation.

Typical clamp impedance (transformed)

## CDN EMCL-35

## EM-Coupling clamp

Comparison of coupling factors EMCL 35 / 20

The high coupling factor of the EMCL-35 allows a test according to level 3 (10V) of IEC 61000-4-6 already at 10 kHz with the test generator CDG 6000-75_10

## Calibration set / calibration data (included in delivery)

- 2 mounting brackets incl. 50/150 Ohm transition
- 1 piece BNC termination, $50 \mathrm{Ohm}, 1 \mathrm{~W}$
- 1 adapter with banana plugs for calibration of the network analyzer, length 34 mm
- 1 piece brass rod 4 mm with banana plugs for setting
 the test level, length 672 mm
- N male to BNC female

| Options |  |
| :--- | :--- |
| CDG 7006-20W | Attenuator $6 \mathrm{~dB}, 20 \mathrm{~W}, \mathrm{BNC}$ connector male / female |
| CDG 7006-100W | Attenuator $6 \mathrm{~dB}, 100 \mathrm{~W}$, BNC connector male / female |
| CDN ABCL-20 | Absorber clamp for additional decoupling during immunity testing according to <br> IEC / EN 61000-4-6, 100 $\mathrm{kHz}-1000 \mathrm{MHz}$, cable diameter max. 20 mm. |
